---

Ruben,

What's the Sol Lynn 5-year review status?

Thanks,

Gary Miller

Gary,  
Do you know the status of the Sol Lynn FYR? Thanks CAS

Carlos,

San Jacinto – The US Army Corps of Engineers is continuing their review of the Site conditions and remedial alternatives. This includes an assessment of the PRPs river model and the use of the Corps own model to compare results for the remedial alternatives. The Corps has already identified several changes needed in the PRPs model, including changing the downstream boundary (move south to Galveston Bay), include more of floodplain areas, change the “hard bottom” assumptions for the upstream San Jacinto River area, and others. The Corps will also be assessing the potential impacts from any barge strikes, which is one of the community’s concerns. The draft final report is due in mid-April, however a recent computer crash resulted in the loss of model runs in progress, which will have to be done over again. This may impact the completion of the mid-April report. During the CAC meeting, community members requested that EPA hold a community meeting – this will be considered with possible timing after the Corps report is final.
